CEL719N STRUCTURAL DYNAMICS

Time: 10:30 am – 12:30 pm

MAJOR TEST

Maximum Marks: 40

Venue: V417

1.12.2006

Q. 1 A simply supported uniform beam has suddenly applied to it the load distribution shown below in Fig. 1, where the time variation is a step function. Indicate what modes are absent and write down the generalized force in the present modes.

10

Q. 2 Find the natural frequencies and mode shapes of the structure given below. Also find the mass normalized mode shapes.

15

Q. 3 Determine the natural frequencies and corresponding mode shapes of a uniform Euler beam model having length L with simply supported ends under transverse vibration (numerical values of first three frequencies are to be given). Choose suitable notations for properties.
