Centre for Energy Studies

Гime	BIOCONVERSION & PROCESSING OF WASTES, ESL-732 : 2 hrs. (MAJOR TEST) MM Attempt all questions	: ₩ 45
l. a)	Name two major 'Alcohol fuel' programmes for running an engine.	(1)
b)	Discuss 'enzymatic hydrolysis' of starch in biomass	(2)
c)	What are the problems involved in conversion of liggo cellulosic material ethanol? Describe briefly the 'steam explosive defibration technique'.	s into (3)
d)	It appears that most of the energy of sugar is retained in fermentation process form of ethanol. Justify.	in the (1)
e)	The fermentation yield of ethanol from sugar, in practice is found to be nearly by wt. Compare this yield with the theoretical yield giving reason.	46% (2)
f)	How does sugar content affects the yield of fermentation?	(2)
g)	Explain the role of benzene in production of anhydrous ethanol.	(3)
2. a)	Describe the following two systems: i) Anaerobic contact digester ii) Anaerobic filter digester	(4)
b)	No methane digester operates in the 40-45°C temperature range. Give reason	n. (2)
c)	Discuss the advantages of operating the anaerobic digestion process below beyond the above temperature range.	w and (2)
d)	Suggest various options to control movement of methane in a complandfill.	pleted (2)
b)	With the help of a neat diagram give a brief description of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production. Comparison of BOM process special emphasis giving on catalyst recovery and syn gas production.	(5) 國
b) c)	Interrelationship between the functional elements of MSW management	(9)
